VORA

Care planning for you and your family

Our vision: one calm place to prepare and stay in control

Product vision. Live demonstration uses synthetic people and documents.

The preparation gap

About 1 in 2

adults aged 45–90 reported none of three advance-care documents.

The preparation gap is real.
What makes the next step easier?

DEAS 2023, ages 45–90, self-report. Advance directive, power of attorney, guardianship directive.
Source: Sozialbericht 2024, chapter 2.7, pp. 100–101.

The product vision

PLAN AHEAD

Understand and prepare

Guided questions, documents and next steps in one place.

STAY IN CONTROL

Choose who sees what

A relative could view a power of attorney while vaccination records stay private.

The full vision includes updates, reminders and relevant appointments.
A card would connect approved information to care systems.

Live demo: the hospital handoff

One chosen version.
One confirmed case.
The original source.

1. Share version 2
2. Receive and confirm
3. Open the original PDF
4. Check the receipt

2 minutes 30 seconds
Erika Berger, synthetic demonstration

Existing document to a configured clinic. Family sharing remains a separate product goal.

What works, and what comes next

THIS LIVE DEMO	Document handoff, case confirmation and prepared links to PDF passages
NEWER VORA	Guided planning, appointment preparation and an AI model connector
FULL PRODUCT	Family permissions, reminders and real KIS/ePA connections

The pinned demo uses deterministic assistance. Newer AI needs a live check before presentation.

Value for families and care teams

A clearer next step.
Control over what others can see.

FIRST USERS	People planning for themselves and their family
PAYER TO TEST	Family-paid or institution-funded access

Proposed value and business options. Stress reduction, demand and savings are unmeasured.

What this submission includes

BUILT DURING THE EVENT

Synthetic personal and clinical flows
Document version and receipt trail
PDF source passage view

PRE-EXISTING INPUTS

General preparation and prompts
Official templates and published research
Development tools and libraries

AI supported development. Later VORA features are outside this pinned demo.

Live-demo snapshot: 6ec45fe. Team contributions must match the submitted version.

Planning ahead, with people you trust

Can people take the next step
and keep control of their information?

Families to test the journey
Clinical and integration partners

Talk to our team after the pitch

Sources and existing infrastructure

Advance-care preparation

DEAS 2023: roughly half of people aged 45–90 reported none of three advance-care documents. This does not measure delay or stress.

Existing infrastructure

ZVR supports document copies through approved institutions.
ePA already supports document exchange. Our integrations are planned.

Institutional context

Germany had 1,841 hospitals in 2024. This describes the landscape, not our buyer count, revenue opportunity or chosen business model.

Prototype boundaries

PINNED DEMO 6ec45fe

Synthetic document handoff
Patient and case confirmation
Prepared PDF source links
Document version and receipt trail

END-TO-END VISION

Per-relative document permissions
Family overview and reminders
Real bookings and KIS/ePA links
New drafts reaching the clinic
Clinical and legal validation

Newer VORA adds planning, appointment preparation and AI integration code.
A live check remains necessary before presenting that separate build.

Questions for the next test

Who pays?	Family-paid or institution-funded access is still open.
Who sees which document?	Goal: a chosen relative sees the proxy, not every record. Today: selected versions go to one configured clinic.
What is success?	Understanding the next step, correct sharing choices and finding the right version and source.
What does AI do today?	Older demo: rules. Newer VORA: a model connector. Live model operation needs a separate check.
